ROW 32

[BUG] QNode with both `expval` and `var` measurements returns wrong results #4416

New issue

Closed

#4426

edddddy opened on Jul 31, 2023

Expected behavior

Consider the below code:

```
dev = qml.device('default.qubit', wires=2)

@qml.qnode(dev)
def circuit1():
    qml.Hadamard(0)
    qml.Hadamard(1)
    return qml.expval(qml.PauliX(0)), qml.expval(qml.PauliZ(1)), qml.var(qml.PauliZ(0))

@qml.qnode(dev)
def circuit2():
    qml.Hadamard(0)
    qml.Hadamard(1)
    return qml.expval(qml.PauliX(0)), qml.var(qml.PauliZ(0)), qml.expval(qml.PauliZ(1))
```

Executing `circuit1` should return

```
(tensor(1., requires_grad=True), tensor(0., requires_grad=True), tensor(1., requires_grad=True))
```

and executing `circuit2` should return

```
(tensor(1., requires_grad=True), tensor(1., requires_grad=True), tensor(0., requires_grad=True))
```

Actual behavior

Executing `circuit1` returns

```
(tensor(1., requires_grad=True), tensor(0., requires_grad=True), tensor(0., requires_grad=True))
```

and executing `circuit2` returns

```
(tensor(1., requires_grad=True), tensor(0., requires_grad=True), tensor(1., requires_grad=True))
```

Context:

Executing a quantum tape containing both `expval` and `var` measurements would currently produce incorrect results. See the linked issue for more details.

Description of the Change:

Change `split_non_commuting` to iterate over the correct set of measurements.

Hello. You may have forgotten to update the changelog!

Please edit [doc/releases/changelog-dev.md](#) with:

- A one-to-two sentence description of the change. You may include a small working example for new features.
- A link back to this PR.
- Your name (or GitHub username) in the contributors section.
