Summary

This commit fixes a regression introduced in the rewrite of the internals of the `OneQubitEulerDecomposer` class to be in rust. Previously the `angles()` and `angles_and_phase()` methods of `OneQubitEulerDecomposer` would work with a non-complex dtype in the input, however because the rust component of the module is strictly typed to only work with a `complex128` dtype passing the array to rust to compute the angles and phase of the unitary would fail. To address this limitation this commit casts the input matrix to be complex before passing it to the rust function.

Thank you for opening a new pull request.

Before your PR can be merged it will first need to pass continuous integration tests and be reviewed. Sometimes the review process can be slow, so please be patient.

While you're waiting, please feel free to review other open PRs. While only a subset of people are authorized to approve pull requests for merging, everyone is encouraged to review open pull requests. Doing reviews helps reduce the burden on the core team and helps make the project's code better for everyone.

One or more of the the following people are requested to review this:

- @Qiskit/terra-core
- @ikkoham

Just one comment about the release note, but the code change looks good.
